Summary

Backend Software Engineer working with Python and SQL, currently building Blookmark, a platform for readers. Hands-on experience with REST APIs, NestJS, and applied AI such as RAG, embeddings, and semantic search.

Education

• SRM Institute of Science and Technology

Sept 2021 – Jul 2025

Bachelor of Technology (B.Tech) in Computer Science and Engineering, **CGPA: 8.17/10**

Experience

Software Engineer, Infomenja Services

Jan 2026 – present

- Build and maintain **Blookmark**, a live platform with blogs, book reviews, and self-discovery quizzes, using **Python, React, and MySQL**.
- Engineered AI-assisted content generation and **semantic search with vector embeddings**, plus a hierarchical CMS, JWT authentication with role-based access control, SEO optimization, and an analytics/admin dashboard.
- Automated Excel-to-**MySQL** data ingestion with **Python** pipelines that clean, validate, and load datasets, replacing manual data entry.

Software Engineer Intern, Squareboat

Jun 2025 – Dec 2025

- Delivered **15+ production REST APIs** in **NestJS, Django, and MySQL**, reducing average API latency by **35%** through query optimization and caching.
- Contributed frontend and backend features to an Applicant Tracking System (ATS) processing **500+ applications monthly**, and integrated the Harbor video conferencing platform for candidate screening.
- Shipped enhancements and bug fixes to backend CMS features on Squareboat's live production platform.

Software Engineer Intern, Tresor Systems

Jul 2023 – Aug 2023

- Implemented secure document-upload features for an employee onboarding portal used by the HR team, streamlining onboarding for new hires.
- Improved HR efficiency by centralizing employee records and digitizing document collection for 100+ onboarding cases, reducing manual paperwork.

Projects

• Briefly: Self-Healing Web Intelligence Platform – github.com/mank25/briefly

Built a self-healing news intelligence platform using **Python, FastAPI, React, SQLAlchemy, Bright Data, and LLMs**; automated web scraping, schema normalization, scraper health monitoring, and self-repair while delivering personalized news briefs.

• Full Stack Job Portal – github.com/mank25/job-portal

Built a full-stack job portal using **Python, FastAPI, React, MySQL, Redis, and Celery**; implemented JWT authentication with role-based access control, job application workflows, and asynchronous background task processing.

• Retrieval-Augmented Generation (RAG) System – github.com/mank25/Rag

Created a RAG question-answering system with **Python, LangChain**, embeddings, and vector databases; implemented document chunking, semantic search, and retrieval pipelines to ground LLM answers in source documents.

Technical Skills

Languages: Python, SQL, JavaScript, TypeScript

Frameworks: FastAPI, Django, NestJS, Node.js, React

AI / LLM Tools: LangChain, Hugging Face, RAG Pipelines, Vector Databases, Embeddings, Semantic Search

Databases / Storage: MySQL, MongoDB, Redis

Tools / Platforms: Git, Docker, Azure, Postman, Bitbucket, Linux

Integrations & Automation: Meta APIs, WhatsApp Automation, Google OAuth, GTM, GA4, SMTP, Email Automation

Concepts: REST APIs, ETL Pipelines, Data Modeling, Query Optimization, Auth & Authorization, Chunking Strategies, Agile

Certifications

NPTEL: Data Mining

Udemy: MERN & GenAI 2025

Udemy: Ultimate RAG Bootcamp Using LangChain, Lang-Graph and LangSmith

NPTEL: Google Cloud

Udemy: Complete Pandas
